

THE GEO-HIKES EXPERIENCE

Is open to professional geologists, geology instructors, students, and hikers. Participants meet others with similar interests while getting great exercise and a unique outdoor experience. You do not have to be a geologist to join and it's free.

Geologists can share their outdoor knowledge and explain to the public the benefit of geology to modern society. This is desperately needed now in the much-maligned energy and mining industries. Geology students (at any level) will gain field experience, an opportunity to make contacts with professional geologists.

To date, hikes have been in the southwest USA and the hope is to expand to other areas. We need more members and trip leaders to expand. For more info and suggestions email Thom Davis, geologicmapsfoundation@gmail.com. Geo-hikes are organized and announced through Meetup: <https://www.meetup.com/Geo-hikes/> where one can view future and past Geo-hikes and join.

Geo-hikes is a volunteer-based group hosted by the Geologic Maps Foundation, a tax-exempt nonprofit, IRS 501 (3), for more info: <http://geologicmapsfoundation.org/index.html>

Top of Thimble Peak, Death Valley.

Geologic map reading, East Point, Santa Rosa Island.
